Oregon Trail (2008 video game) Oregon Trail is a computer and video game developed and published by Rainmaker Entertainment. It is based on the classic educational computer game Oregon Trail released in 1971. Gameplay Differences from original While many of the concepts and scenarios remain the same, this game differs in certain aspects: The player is now a young adult male (or female). The map of the USA is printed on a single map instead of a pair of maps. There is no food shortage this time. There are no cars available to travel with. The player has the option of living in the wagon, even though it doesn't function as a

vehicle. There are different tasks, e.g. replace a wrecked wagon. The game starts in the West, with westbound driving. The major story difference between this game and the original is the introduction of the person who is to become a spouse in the future, and the spouse's introduction at the start of the game. Unlike the original game, in which the husband was introduced before the wife, the person who is to be the future spouse is introduced at the start of the game. In the original game, before leaving the starting point, the player can choose to rest or to continue driving on the way to the destination. There is also a choice of which type of wagon to travel with. In this game, the player will arrive in the city where the future spouse lives before the train reaches the destination. Changes from original The most important change to the game is that instead of there
