Windows XP/Vista/7/8 and Mac OS X 10.7 and above. What is new in official SPD2.01 build 1.01 software version? - New Release. What is expected in the future? Newly-made SPD2.02 be downloaded from our site. Check also SPD2.01 release notes. Enjoy using SPD2.01! Downloading playlists can be done in various ways. This means that you can sort the music that you downloaded into folders and radio stations, which will allow you to find them easier. The application can download all playlists from various radio stations that you specify, or you can edit the playlists that were previously downloaded. * In order to download playlists, you will need to have the .Net Framework installed on your computer. This is a third-party software, which helps the application to download and play radio stations. * In order to keep the application running smoothly, you will need to update the application every now and then. Therefore, it is highly recommended to run SPD2 with an automatic updater, like the one that comes with the program. * In order to delete previous playlists, you can either use the program's option menu, or you can just use the 'Purge Playlists' button. The latter is more simple and convenient, as it can help you update any playlists. * As SPD2 will run as an application, you can download other applications. This means that you can use the list search function to find any other programs that you might need. * The application is compatible with Windows XP, Vista, 7 and 8, as well as Mac OS X 10.7 and above. * If you find any new playlists that you want to download, you can keep the playlists in the application by simply dragging and dropping the .mp3 files into the 'Playlists' folder. Why do we need to know the .NET framework? The .NET framework is a collection of reusable libraries and tools. It allows applications to share code between different versions and systems. This helps applications to be more compatible and to be quicker. It also helps the developer to not need to rewrite code for each application. What is not included in the program? The following elements are not included in the free version of the application: * Some radio stations cannot be downloaded, as they require a paid account. * 2edc1e01e8

System Requirements:

-A Pentium 233/1.4GHz or better CPU -512MB RAM -A Radeon 8500/GeForce 7900/GeForce 8800 series or better video card -Windows XP or later -Java 1.5 or later -Internet Explorer 4.0 or later -DirectX 9.0c or later -GeForce Experience 2.0.1 or later -Game Enhancements Control (WEQX) Control v2.2 or later
